Personalized, portable workflows

Every day, people use document-driven workflows to create content, collaborate with peers and conduct business. These workflows are often generic and limited to a single multifunction product (MFP). The App2Me® solution removes these barriers to productivity, enabling users to download innovative, customized workflows to any client and execute them anywhere. Just log in to an App2Me-enabled MFP to access personalized widgets and initiate a wide variety of workflows automatically.

Revolutionary Portability

Download widgets to any client (PC desktop, PC laptop or smartphone) and use them on any Brand MFP enabled with the App2Me solution.

- Expand your experience. No matter where you go, your experience at each App2Me MFP remains completely personalized for maximum convenience.
- Utilize the entire fleet. App2Me automatically discovers all MFPs on the network that are App2Me-enabled, so you can choose the most convenient MFP to utilize your workflow.
- Eliminate worries about whether a job was delivered to the wrong MFP, or to an MFP that is out of paper or offline. Perform any task at any MFP.
- Enable mobile workers to execute a full spectrum of workflows, including printing and scanning, without installing print drivers or asking IT for help.

Unlimited Integration Opportunities

App2Me improves efficiency through widgets that control a virtually endless array of workflows.

- Maximize productivity at the MFP. Use MFP Widgets to control printing and scanning, enforce environmentally friendly settings (such as duplex output), monitor systems or events, or execute tasks directly from a PC or smartphone.
- Do more with the software you already use today. Software Widgets utilize tools for print preparation, document distribution and other software applications that reside on your desktop or laptop PC.
- Take the Web to work with Internet Service Widgets that incorporate customer relationship management, document archiving, file delivery and other Web services that are crucial to your job.
- Importing documents or printing from network business applications can be very difficult. Enterprise Application Widgets can tie into these applications, making users more productive.
- Depend on Savin and our third-party developer partners to create widgets for almost any need.
- Create specialized widgets for virtually any need, in any framework across multiple platforms that App2Me supports, such as Google Desktop™ and more.

Bringing Savin Value to Your Organization

Savin technology offers a diverse portfolio of solutions to help your organization stay competitive and move ahead. Let Savin show you how to empower your business to improve critical processes, keep information secure, ensure compliance and promote environmental sustainability while reducing the total cost of ownership.

Outstanding Simplicity

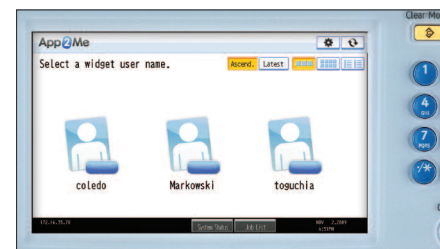

App2Me simplifies complex workflows. Widgets can combine, distribute, edit and create documents, as well as perform many other tasks automatically.

- Develop completely new workflows that combine MFP capabilities, other software packages and Software-as-a-Service (SaaS) applications.
- Streamline daily activities. Use App2Me widgets for your most frequently performed workflows to complete jobs faster with fewer steps.
- Eliminate redundant effort. With App2Me, there is no need to repeatedly install print drivers, connect to MFPs, set up Scan-to-Folder directories or other IT Administrative set-up.
- Reduce the risk of error. Every widget is assigned a specific workflow, so you can be confident it will be executed correctly every time.

Download widgets from App2Me.com to any client, including desktop and laptop PCs. App2Me widgets are also available for iPhone and Blackberry devices.

When you log in at an App2Me-enabled MFP, you gain access to a personalized set of widgets that can perform an extraordinary variety of workflows automatically.
